

Thank you for showing interest in our NFT! Congratulations! You have won a game asset! To open and use the game asset you can use Voxedit tool to import the game asset and also use Sandbox if you want to develop your own game. Both of these are free tools you can find on [Sandbox.com](https://www.sandbox.com). You can use them to create your own metaverse/ characters depending on the asset type you have received.

In order to import the file to your Voxedit follow these basic steps:

- 1) After you download the file from OpenSea, Locate the folder once you open Voxedit. Select animator and then click Open file**

2) Then click on open file and then locate the downloaded folder. Go inside the file and select the .VXR file related to the asset type. This can be easily spotted as Voxedit will show an icon when it detects it. Import the file and then you can edit modify and upload it to sandbox marketplace, or export it into any format of your choice.

3) Enjoy!
